

Coronavirus Disease 2019 (COVID-19)

Think you have COVID-19?

No sound. Silent video.

Think you have COVID-19?

Call your healthcare provider before your appointment

And tell them you think you might have COVID-19.

This will help the doctor's office protect themselves and other patients.

Take a test as soon as you can

Stay home and isolate from other people except to get medical care

Wear a well-fitting mask when you need to be around other people

Monitor your symptoms, and if they get worse, talk to your healthcare provider

If you are at high risk of getting very sick, you may be eligible for treatment.
